Hero Image

(featuring background-image)

Requires "interesting" HTML. **background-image** on a **<div>** and not a <img> element.

Tour (10min)

www.clarity.fm

```html
<div class="hero-block"></div>
```

```css
.hero-block {
  background-image: url(waffles.jpg);
}
```

background-size: cover

A keyword that is the inverse of contain. Scales the image as large as possible and maintains image aspect ratio (image doesn't get squished). The image "covers" the entire width or height of the container. When the image and container have different dimensions, the image is clipped either left/right or top/bottom.

```html
<div class="hero-block"></div>
```

```css
.hero-block {
  background-image: url(waffles.jpg);
  background-size: cover;
}
```

```html
<div class="hero-block"></div>
```

```css
.hero-block {
  background-image: url(waffles.jpg);
  background-size: cover;
  background-position: ;
  background-repeat: ;
  padding: ;
}
```

```html
<nav> … </nav>

<section class="hero-block"></section>

<section class="intro-block"></section>
```
